ANNOUNCING...

SunRidge Farms' Solar Expansion 2011

CURRENT SOLAR OUTPUT	AFTER NEW INSTALLATION
99,000 Watt Solar Panel System	500,000 Watt Estimated Solar Energy Production
Current Annual Greenhouse Gases Avoided CO ₂ = 232,536 lbs	Estimated Annual Greenhouse Gases Avoided CO ₂ = 1,029,474 lbs

Currently the Amount of Energy Produced in a Year:

Provides the equivalent energy to run 3,732 homes for a day.

Avoids pollution which an average car emits over 8,490 days (about 23 years).

After Installation the Estimated Amount of Energy Produced in a Year:

Will provide the equivalent energy to run 16,515 homes for a day.

Will avoid pollution which an average car emits over 37,567 days (about 102 years).

Construction Begins in Spring 2011
